

Abstract

Online Restaurant E-Menu Realm is a modern web-based digital menu system that allows customers to explore restaurant dishes, add items to a cart, and place orders through an interactive interface. The platform provides categorized menus for vegetarian, non-vegetarian, and desserts, along with pricing and images for each item.

Customers can add items to the cart, modify quantities, and complete orders through dine-in or home delivery options. The system also includes payment method selection and customer feedback through star ratings and reviews. This digital menu system enhances restaurant efficiency, improves customer experience, and simplifies the ordering process.

System Architecture

- 1 **Users** → Customers and Restaurant Staff
- 2 **Frontend** → Interactive Web Interface (HTML, CSS, JavaScript)
- 3 **Menu Display** → Categorized Food Items with Images and Prices
- 4 **Cart System** → Dynamic Cart Management and Order Calculation
- 5 **Order Processing** → Customer Details, Payment Selection, and Order Confirmation
- 6 **Feedback System** → Star Rating and Review Submission

Implementation – Learning Modules

CO1 Internet Fundamentals & HTML

- Web page structure
- Navigation menu design
- Food card layout
- Menu section structure

CO2 CSS Design

- Responsive layout design
- Card-based food menu styling
- Flexbox/Grid menu layout
- Hover animations and UI styling

CO3 JavaScript Programming

- Add to cart functionality
- Cart quantity management
- Order form validation
- Price calculation logic

CO4 JavaScript Interactivity

- Dynamic cart updates
- Order confirmation modal
- Review system with star ratings
- Interactive UI behavior

Key Features

- Digital Restaurant Menu
- Food Categories (Veg / Non-Veg / Desserts)
- Add to Cart System
- Dynamic Price Calculation
- Dine-In and Delivery Order Options
- Payment Method Selection
- Customer Review & Rating System

Conclusion & Future Scope

The Online Restaurant E-Menu Realm demonstrates how web technologies can improve restaurant services by providing a digital ordering platform. Customers can easily browse menus, select food items, and place orders efficiently.

The system reduces manual errors, improves order management, and enhances the dining experience through a user-friendly interface. Future improvements may include online payment gateway integration, real-time kitchen order tracking, mobile app support, and customer account management.
